Summary

Software Engineer with 5+ years of experience building frontend and fullstack applications for large-scale web platforms across healthcare, logistics, and enterprise environments. Specialized in React ecosystems, micro frontend architectures, and scalable web application development using JavaScript/TypeScript and Node.js.

Experience includes modernizing legacy frontend systems, establishing component documentation standards with Storybook, and implementing testing strategies covering unit, end-to-end, and load testing. Designed caching strategies that reduced calls to core APIs, as well as database indexing optimizations to improve query performance and application scalability.

Worked across cross-functional agile teams delivering production systems used by millions of users. Background in Control and Automation Engineering with additional experience in Python and Go, cloud infrastructure, microservices, and embedded systems development.

Experience

Fullstack Software Engineer

Medprev Online

12/2024 – 03/2026

- Developed and maintained scalable front-end features accessed by millions of users daily.
- Implemented a caching layer that decreased core API calls 5x, significantly improving performance and scalability.
- Implemented unit and end-to-end with Playwright to ensure platform reliability.
- Implemented a GraphQL API enabling query segmentation and granular caching through per-resolver partitioning, improving performance and reducing redundant data fetching.

Frontend Developer

Bornlogic

03/2022 - 12/2024

- Refactored a legacy React class-based codebase into modern React architecture to improve maintainability and development workflows.
- Implemented a micro frontend architecture using Single SPA, enabling modular frontend development across applications.
- Introduced Storybook for component documentation and isolated UI development, improving component standardization and developer experience.
- Enhanced code review workflows and standardized coding patterns across frontend modules to improve consistency and maintainability.
- Worked with Google, TikTok, and Meta APIs to integrate external services, enabling data synchronization, automation, and platform interoperability across marketing and analytics systems.

Fullstack Software Engineer

CargOn

07/2021 - 03/2022

- Implemented database strategies that reduced operational costs by minimizing reliance on third-party services and external API usage.

- Developed a document issuance system integrated with government and third-party services to validate and process CT-e documents.
- Designed and implemented MySQL database schemas to support application features and backend services, including indexing strategies and query optimization to improve performance and scalability.
- Mentored and trained new developers during onboarding and project integration.
- Contributed to an engineering implementation featured as a Prisma success story showcasing the company's technical adoption strategy.

Fullstack Software Engineer

IColabora

02/2021 - 06/2021

- Developed RESTful APIs and integrated third-party services for web applications using backend technologies and service integrations.
 - Implemented an automated call management system featuring dialog tracking, profanity detection, call duration monitoring, and conversational flow analysis to improve operational oversight and communication quality.
-

Education

Scientific Research

UTFPR - University of Technology Paraná

- Developed a high voltage power supply operating in DCM for Power Factor Correction (PFC).
- Conducted research on this topic, contributing to significant findings and publications.

Control and Automation Engineering

UTFPR - University of Technology Paraná

- Specialized in automation systems and microcontroller programming.
 - Worked on projects involving PIC, Tiva C Series, Arduino, PLC.
 - Utilized MATLAB/Simulink for advanced system modeling and EMI behavior analysis to evaluate signal resilience against environmental noise.
 - Designed a high-voltage power supply operating in Discontinuous Conduction Mode (DCM) for Power Factor Correction (PFC).
 - Conducted comprehensive research on power electronics topology, contributing to findings in electromagnetic interference and system optimization.
-

Technical Skills

- **Programming Languages:** Javascript, Typescript, Go, Python, C, C#, C++.
 - **Frontend:** React.js, Vue.js, Next.js, SvelteKit, TailwindCSS, React Native, HTML5, CSS, Single SPA, Storybook
 - **Backend:** Node.js, Django, Flask, REST APIs, BFF Architecture, GraphQL
 - **Testing:** Jest, Playwright, Unit Testing, Micro Frontends, Microservices, Refactoring, SOLID
 - **Databases/Query:** PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, Key indexing
 - **Cloud and DevOps:** Docker, AWS (EC2, S3, RDS, Lambda), Kubernetes, CI/CD, Pipelines.
 - **Tools & Technologies:** JIRA, Notion, Miro, Agile, Slack, Workplace, Microsoft Teams, Datadog, Sentry, Posthog..
 - **Microcontrollers:** PIC, Tiva C Series, Raspberry Pi, Arduino.
 - **Concepts:** SOLID, Unit Testing, Refactoring, Microservices, Micro Frontend, BFF, AI.
-

Soft Skills

- **Communication:** Effectively articulated technical concepts to both technical and non-technical stakeholders.

- **Teamwork:** Collaborated seamlessly with cross-functional teams to deliver complex projects on time.
- **Problem Solving:** Demonstrated strong analytical skills to identify issues and implement efficient solutions.
- **Leadership:** Mentored junior developers, fostering growth and enhancing team capabilities.
- **Adaptability:** Quickly adapted to new technologies and methodologies in a fast-paced environment.
- **Time Management:** Prioritized tasks effectively to meet project deadlines.
